

1 hour	Task 1: CSS Consolidation
<p>This week we've begun to look at CSS (<i>Cascading Styles Sheets</i>) and how these can interact with our HTML pages to provide styles to our pages.</p> <p>Before beginning the main content of this week's tasks, it is worth giving yourself a reminder of CSS syntax and how to integrate this with your HTML pages. On the channel I have posted the slides to this week's session, as well as the CSS cheat sheet shared during the session.</p> <p>Please also watch the following video on implementing CSS:</p> <p>CSS Crash Course for Beginners</p>	

4 hours	Task 2: Creating a complete site
<p>We have now looked at basic HTML tags, HTML Tables/Forms and CSS basics – it's not time to put it all together!</p> <p>Your task for this week is to create a functioning example website for a retail client. You can pick a retail client/sector of your choosing (e.g. a bakery, an online music store etc.)</p> <p>You will need to create your client a website that meets the following criteria:</p> <ul style="list-style-type: none"> • At least 4 pages (including the homepage/landing page) • Consistent CSS applied throughout • A range of media content (this should all be stored locally) • A 'Contact Us' page with a working form • An order page (or similar) with a working form <p>The criteria above is the <i>minimum</i> I would expect from this assignment – you are welcome to add any further features/elements that you wish!</p> <p>Once complete, you will need to commit/push your entire repository to your GitHub profile – it is <i>your responsibility to make sure that your work is uploaded</i>.</p> <p>I'd also request that you ZIP your repository for this week and add it as an attachment to the assignment as a backup.</p>	

Marking criteria (Task 2)

	Pass	Merit	Distinction
Structure	<ul style="list-style-type: none"> • Use of <html> tag incorrectly placed • <!DOCTYPE html> used correctly 	<ul style="list-style-type: none"> • Use of <head> and <body> tag accurately • Attempts to use the <title> tag 	<ul style="list-style-type: none"> • Multiple levels of nesting including grandchildren, great-grandchildren. • <title> tag used correctly across the website
Tables	<ul style="list-style-type: none"> • Attempts to create a table (multiple errors) • Use of <table> tags correct and accurate 	<ul style="list-style-type: none"> • Table has clear headings throughout 	<ul style="list-style-type: none"> • Use of attributes applied correctly and appropriately throughout
Presentation	<ul style="list-style-type: none"> • Some whitespace used to good effect • Indentation attempted but inaccurate • Correct HTML naming convention 	<ul style="list-style-type: none"> • Whitespace used appropriately, at times • Indentation largely accurate 	<ul style="list-style-type: none"> • Website meets W3C standards consistently • Clear commentary provided throughout • Code is explicitly clean and easy to read
CSS	<ul style="list-style-type: none"> • Some attempts at applying CSS • Generic styles used throughout 	<ul style="list-style-type: none"> • A range of elements styled with CSS to good effect 	<ul style="list-style-type: none"> • CSS used appropriately and consistently throughout to a professional standard
Forms	<ul style="list-style-type: none"> • Attempts to create a functional form in HTML 	<ul style="list-style-type: none"> • A working form with some range of <input> tags used to good effect 	<ul style="list-style-type: none"> • A wide range of <input> tags used to a professional standard
